Stack config moze obsahovat niekolko druhov veci:

stringy include a exclude ktore mozu obsahovat vsetky moznosti z lokacie
https://api.stackexchange.com/docs/questions

string tag - jednotlive hodnoty tagov

bool testing - true or false - urcene na testovanie odosielania a komunikacie aj ked je limit
prejdeny

string downloadSubject - "question" alebo "user", podla toho co je ciel stahovania. Question je
nastaveny defaultne. Question downloads questions posted on specific day, user downloads
user created on specific days.

string serverURL - url kam poslat trojice. defaultne nastavene na
http://team08-16.studenti.fiit.stuba.sk:8008 (nie je potrebne specifikovat). Dalsie moznosti:
http://localhost:62345

Odporucany set configov:
string "include" = question.answers, question.comments, question.body, answer.body,
comment.body, answer.comments

bool "testing" = true
#ak testujeme :)

string serverURL = http://localhost:62345
#ak testujeme s lokalnym serverom
